WORK EXPERIENCE

Akkenum Interactive

May 2025 to December 2025

Software Developer - Android Development (May/2025 - December/2025)

- Developed and launched a feature-rich Android app for an institute using Java and Firebase, streamlining operations and improving user engagement.
- Implemented Firebase Authentication to enable secure user management.
- Utilized Firebase Realtime Database to store and manage data ensuring seamless data syncing across platforms.
- Developed and implemented role-based access control with differentiated permissions
- Delivered a user-friendly mobile application with intuitive navigation and real-time updates, significantly improving operational efficiency for the institution.

HCLTech Sri Lanka

April 2022 to April 2025

Database Administration - MSSQL (December/2023 - April/2025)

- Managed MSSQL databases, ensuring system availability and reliability.
- Resolved server issues affecting RTMS publishing for production scheduling.
- Investigated and mitigated network issues impacting database performance.
- Verified and restored backup accounts, strengthening data recovery processes.

Software Engineer - .NET (April/2022 - December/2023)

- Developed and maintained web applications using .NET Core, MVC, Entity Framework, and C#.
- Designed RESTful APIs to integrate frontend and backend systems.
- Improved database performance through optimized data models and queries.
- Implemented secure authentication and role-based access control.
- Delivered enterprise-level applications, including e-commerce and cab booking systems.

EDUCATION

MSc Data Science and Artificial Intelligence

Aston University, UK

2026-Present

BSc(Hons) Computer Science and Software Engineering

SLIIT Academy (Top-Up University of Bedfordshire, UK)

2021

- Second Class, Upper Division

PROJECTS

Internal Management System (August/2020 - October/2020)

Desktop Application (C#, SQL)

Developed a WPF-based internal management system to streamline organizational processes, including project management, client tracking, invoicing, messaging, and user profile management

- Designed a dashboard displaying project status and notifications.
- Implemented CRUD functionality for projects, tasks, and client details.
- Automated invoice generation.
- Developed an internal communication system for interactions among users.
- Developed role-based access control for user management.

Cab Booking Application (January/2023 - February/2023, HCLTech)

Web Application (.NET, .NET Core Web API)

Developed a web-based cab booking system with separate portals for Admin and Customers

- Managed user accounts, assigned roles and performed CRUD operations on users.
- Enabled CRUD operations for cabs and configured routes and destinations for cab services.
- Created RESTful APIs for Users, Cabs, and Destinations to facilitate CRUD operations.
- Utilized Entity Framework Core for relational data handling and optimized queries for performance.

ECommerce Web Application (July/2023 - August/2023, HCLTech)

Web Application (.NET Core MVC, Entity Framework Core, SQL Server)

Developed a fully functional e-commerce web application with user authentication, product management, cart functionality, order processing, and payment integration.

- Implemented user profile management with secure authentication.
- Enabled CRUD operations for products and categories.
- Designed a cart system and integrated an order management system with payment processing.
- Used Entity Framework Core to manage relational data.

Institute Management Android App (May/2025 - December/2025, Akkenum Interactive)

Mobile Application Development (Java, Firebase Realtime Database, Firebase Authentication)

- Developed an Android app for an educational institute, offering features such as user authentication, student/teacher management, attendance tracking, and fee record management.
- Integrated Firebase Authentication for secure user login and registration, ensuring data privacy.
- Designed and implemented a dynamic dashboard displaying summary information on students, teachers, attendance, and fees.
- Used Firebase Realtime Database for managing and syncing real-time data, including student and teacher details, attendance records, course information, and fee status.
- Created a role-based access control system with three user roles: Admin, Teacher, and Student, each with tailored permissions for CRUD operations.

SKILLS

Development Skills: Android, Website, Desktop application development

Industry Specific Skills: Task management, Agile SCRUM

Programming Skills: HTML, CSS, SQL, C/C++, C#, JAVA, .NET
